SWT22022 – Practical for Internet Application Development

Note:

- **Your project must be contained within a folder named your registration number (SEU_IS_XX_ICT_XXX).**
 - **ICTXXX means you have to add your index number everywhere that mentions ICTXXX.**
 - **Your database name must be your registration number (SEU_IS_XX_ICT_XXX).**
 - **Add screenshots of your final outputs.**
 - **Finally, you have to compress your folder.**
-

You're tasked with developing a simple web application for a bookstore. The application allows owner to:

- Store books in database
- View all the stored books data in database
- View single book details
- Edit single book details
- Delete book by ID

Technical Requirements:

- **Frontend:** HTML, CSS (Bootstrap) and JavaScript
- **Backend:** PHP with MySQL connectivity

Assessment Criteria:

- **Frontend development**
 - Design simple website with HTML and Bootstrap
- **Database Design (MySQL):**
 - Create database **with your registration number**
 - Create a table named **bookICTXXX**
 - Table columns - title, author, ISBN, price, description.
- **JavaScript Script (Frontend):**
 - Write all the functions using **fetch()**.

(15 Marks)

(15 Marks)

(20 Marks)

- **PHP Script (Backend):**
 - You should use OOP concept here.
 - Connect to the MySQL database using PHP's MySQLi extension .
 - Implement functionalities to (**DatabaseConnectionICTXXX** class):
 - Create connection
 - Get connection

(10 Marks)

- Implement functionalities to (**BookICTXXX** class):
 - Display a list of books retrieved from the database
 - Store data in database
 - Update specific book details
 - Delete book details

(20 Marks)

- **Security Considerations:**
 - Use at least one PHP web security practice
 - Use at least one JavaScript web security practice

(10 Marks)

Evaluation:

- Correctness and functionality of the application
- Code structure, organization, and readability
- Use of best practices (Error handling)

(10 Marks)
