

SWT 22022 – Practical
for Internet Application
Development

Department of Information
and Communication
Technology
Faculty of Technology

Lab sheet :16
Reg. Number: SEU/IS/20/ICT/084
Academic Year :2020/2021
Date: 2024.10.14
Practical No :17

Title:

- HR Management System - III

Aims:

- Implement routes for views
- Implement views

Tasks:

- Update the APIs
- Update controller
- Create blade files

Activities :

1. Update the APIs

// For views

```
Route::get('employee/{id}/edit', [EmployeeController::class,
    'edit']);
```

2. Update controller

```
public function edit($id) {
    $employee = Employee::findOrFail($id);
    return view('employee.edit', compact('employee'));
}
public function update(Request $request, $id)
{
    $employee = Employee::findOrFail($id);
    $employee->update($request->all());
    return redirect('employee')->with('success', 'Employee updated
successfully.');
```

```
}
public function delete($id) {
    $employee = Employee::findOrFail($id);
    $employee->delete();
    return redirect('employee')->with('success', 'Employee deleted
successfully.');
```

```
}
```

3. Create blade files

I. layout.blade.php

II. edit.blade.php

EmployeeController.php

```
<?php

namespace App\Http\Controllers;

use App\Models\Employee;
use Illuminate\Http\Request;

class EmployeeController extends Controller
{
    public function index()
    {
        $employees = Employee::all();
        return view('employee.index', compact('employees'));
    }

    public function create()
    {
        return view('employee.create');
    }

    public function store(Request $request)
    {
        $request->validate([
            'name' => 'required|string|max:255',
            'role' => 'required|string|max:255',
            'salary' => 'required|numeric|min:0',
            'age' => 'required|integer|min:18|max:65',
        ]);

        Employee::create($request->all());
        return redirect('employee')->with('success', 'Employee created successfully.');
```

```

        return view('employee.edit', compact('employee'));
    }

    public function update(Request $request, $id)
    {
        $employee = Employee::findOrFail($id);
        $request->validate([
            'name' => 'required|string|max:255',
            'role' => 'required|string|max:255',
            'salary' => 'required|numeric|min:0',
            'age' => 'required|integer|min:18|max:65',
        ]);

        $employee->update($request->all());
        return redirect('employee')->with('success', 'Employee updated
successfully.');
```

```

    }

    public function delete($id)
    {
        $employee = Employee::findOrFail($id);
        $employee->delete();
        return redirect('employee')->with('success', 'Employee deleted
successfully.');
```

```

    }
}

```

web.php

```

<?php

use App\Http\Controllers\EmployeeController;

// Employee Management Routes
Route::get('employee', [EmployeeController::class, 'index']);
Route::get('employee/create', [EmployeeController::class, 'create']);
Route::post('employee/store', [EmployeeController::class, 'store']);
Route::get('employee/{id}/edit', [EmployeeController::class, 'edit']);
Route::post('employee/{id}/update', [EmployeeController::class, 'update']);
Route::delete('employee/{id}', [EmployeeController::class, 'delete']);

```

layout.blade.php

```

<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">

```

```

    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <meta http-equiv="X-UA-Compatible" content="ie=edge">

</div>
@endsection

```

The screenshot shows a web browser window with the address bar displaying '127.0.0.1:8000/employee/1/edit'. The page title is 'HR Management System'. The main content is a form titled 'Edit Employee'. The form contains four input fields: 'Name' with the value 'Kalhara', 'Role' with the value 'Students', 'Salary' with the value '99999999.99', and 'Age' with the value '24'. Below these fields is a blue 'Update' button.

Discussion:

- In this lab session titled "HR Management System - III", we continued building our HR management application by focusing on creating a more dynamic and interactive user interface. The session aimed to strengthen our skills in Laravel by implementing routes specifically designed for views, such as editing, updating, and managing employees. We updated the APIs to ensure proper communication between the application layers and refined the controller logic to handle CRUD operations efficiently. Additionally, we developed new Blade files to enhance the visual representation and usability of the application. This hands-on practice allowed me to understand the integration between routes, controllers, and views while reinforcing my ability to implement scalable and maintainable code for real-world web applications.
