

Lab sheet 23**Submission Due: 13.11.2024****Title:** Weather App - React**Aims:**

- Refine React development skills by building a small web application

Tasks:

- Create new React app
- Implement Components
- Use Axios for fetch weather data

Activities:

1. Create new project
2. Install Axios
3. InputSearch.jsx

```
const [city, setCity] = useState("");

const handleInputChange = (e) => {
  setCity(e.target.value);
};

const handleSubmit = (e) => {
  e.preventDefault();
  onSearch(city);
};
```

4. WeatherDisplay.jsx

```
return (
  <div>
    <h2>{name}</h2>
    <p>Temperature: {Math.round(main.temp - 273.15)}°C</p>
    <p>Feels Like: {Math.round(main.feels_like - 273.15)}°C</p>
    <p>High: {Math.round(main.temp_max - 273.15)}°C</p>
    <p>Low: {Math.round(main.temp_min - 273.15)}°C</p>
    <p>Description: {weather[0].description}</p>
  </div>
);
```

5. App.jsx

```
const [weatherData, setWeatherData] = useState(null);

const handleSearch = async (city) => {
  const apiKey = "18e9f6619d46814b07e9794cd43789e3";
  try {
    const response = await axios.get(
      `https://api.openweathermap.org/data/2.5/weather?q=${city}&appid=${apiKey}`
    );
    setWeatherData(response.data);
  } catch (error) {
    console.error(error);
    setWeatherData(null);
  }
};
```
